Think Small

Don't be fooled;

even the smallest electronic systems

or accessories – personal computers, computer peripherals,
point of sale equipment, and workstations – have a **need** for
power protection.

Best Power Patriot

The **Mighty Mini UPS**

it **keeps** your **data safe** and your
equipment operational through
spikes, surges, sags, noise, lightning, or full-blown
power outages.

compact

and

ready

"We operate a computer network that ties in our campground, a lodge reservation system, a restaurant, a warehouse, three gift shops, and a business office, with a modem located down in St. Paul. Being in the middle of nowhere, if power goes out, we're shot. Despite frequent power problems, the Best Power Patriot has never let us down."

Marilyn Doyea, MIS Manager
Itasca State Park
Northwest Minnesota

to go

Why UPS?

Because no system is too small to be protected...

Should your systems go down for whatever reason – power outages, line disturbances, noise or glitches – your operations can come to a screeching halt. Preventing such operational interruptions is the job of a UPS.

Information Protection & Support

Most of the time, you don't even need to know that a UPS is providing protection to your systems. In doing its job, your UPS should be able to accommodate all of your equipment, with properly powered, protected, and positioned plugs, including internet connection protection, that keep you up and running.

Yet, when a critical power disturbance does occur – for whatever reason – you want

working. Such a UPS will: a) use its battery only when absolutely necessary to maintain load power; b) recharge its own battery whenever connected to utility power; whether its power switch is on or off; c) regularly test its battery and report on its capability to handle today's load; and d) contain a battery that is user-replaceable.

The annual cost of lightning-related outages to North American industry alone exceeds **\$1.4 billion.*** Furthermore, power outages are the number one **cause** of business disruptions.**

Isn't it time you **protected your operations** with an uninterruptible power system?

Power Management

You'd certainly expect any UPS to take care of a blackout situation, by providing uninterrupted power long enough for a safe shutdown.

And while blackouts are the most obvious power problem, deregulation of the power industry, harmonic disturbances within your own equipment, and the undercapacity of utilities to meet demands for power, all contribute to make power quality protection and management a critical issue.

your UPS to warn you of that situation right away, so you can save your files and safely power down your equipment.

Engineered Wisdom

A smart UPS should be available in a range of VA sizes, so you can match your UPS selection to your specific power protection needs. And those specific needs should not only include your computer, but all of your critical peripheral equipment as well.

When you do experience a power outage, you should expect an intelligent UPS to keep your equipment powered and performing for as long as possible, so you can keep on

Why Take Chances? Protect Your Data & Your Equipment. Get Smart. Get Patriot-Protected.

Best Power

Patriot

Benefits & Features

- > **Protects against spikes, surges, sags, noise, lightning, and power outages.**
- > **NEW most-popular power protection ranges: 250VA, 425VA, and 600VA** – the highest-rated protection in this configuration in the industry.
- > **NEW sleek, unobtrusive design** for desktop, floor, or wall-mounted use.
- > **NEW outlet configuration:** four with uninterruptible power and surge suppression, two with surge suppression only; all spaced for transformer block plug-in.
- > **NEW LED indicators and audible alarms** warn you when power disturbances occur and battery exhaustion is near.
- > **NEW internet-ready** telephone line or network surge protection, keeps your equipment safe from these “backdoor” disturbances.
- > **NEW shut-down capability**, attended or unattended, with optional CheckUPS® II Suite power management/monitoring/control software and connecting cable, helps to keep your data safe and your equipment free from damage.
- > **NEW user-replaceable battery** that rides through the duration of most black-outs and keeps you up and running, with a low battery warning providing time for saving of data and safe equipment shut-down.
- > **NEW Cold-start allows powering** of protected equipment for a limited time when no utility source is available.
- > **Advanced-technology battery management** assures optimum runtime when power fails – and automatic recharge when power returns, whether your Patriot is turned on or not, as long as it is plugged into a live power outlet.
- > **U.S. & international voltages** available, with 50/60Hz auto-frequency operation.

Best Power Solutions

NEW Best Power Patriot...The Mighty Mini UPS with Intelligent Power Management, plus Information Protection and Support

Best Power's NEW Patriot UPS is your smart choice for dependable smaller-system operation, providing protected computer operation with power that's reliable at an economical price. Now there's no need to spend more to make sure you have an adequate amount of protection for your systems.

Protecting Your Information

No Uninterruptible Power System in its class offers more multiple UPS outlets than Patriot – 4 with UPS and surge protection, and 2 with surge protection only (for less critical, higher-power loads). All are spaced for plug-in of transformer block power plugs. Plus, Patriot is internet-ready, with connections that offer network/modem protection against "backdoor" surges from telephone lines. Add to that the shut-down capability

Wisdom Through Engineering

The newly designed Patriot UPS is available in the popular 250VA and 425VA ratings, as well as a new 600VA size – the highest VA rating in its class. Such ratings give you the ability to choose the appropriately sized UPS for all the equipment you want to protect. But Patriot's smart engineering doesn't end there.

In fact, the new Patriot UPSs have intelligence engineered right into their "brains" – called

Best Power's NEW Patriot UPS Flexibility Gives You the Option for Desktop, Floor, or Wall-mounted Use.

"In the most lightning-struck county in the U.S., through three hurricanes and three power outages, I have yet to lose a minute of uptime, a bit of information, or a single fax with Patriot protection."

Donald Hammond
Realty Services
Elberta, Alabama

Managing Your Power

The strength of the new Patriot UPS is its ability to filter all of the spikes, sags, surges, noise and glitches that come down your power line, seen and unseen, on a daily basis, so your equipment receives the power it requires at all times.

Yet, when a blackout does occur, Patriot is ready to provide you with the maximum runtime available, so you can keep right on working. And if runtime grows short during long outages, you'll still be able to save your files and power down your equipment prior to battery exhaustion.

(with optional connecting cable and software) for critical loads, as well as a user-replaceable battery, and you've got a UPS that you can connect and forget. And forgetting about Patriot's built-in power protection will be easy, with its all-new unobtrusive design that looks good on or under a desk, or even hanging on a wall.

Yet, when there's a problem you should know about, Patriot's easy-to-spot LED indicators and audible alarms give you the diagnosis fast, so you can make intelligent next-step decisions based on facts, not guesswork.

"firmware." This wisdom makes sure that battery power is activated only when absolutely necessary. And, in order to keep its battery in working order for as long as possible, Patriot intelligence allows only the correct amount of power to go to the battery during the recharge cycle, so it won't be damaged by overcharging or weakened by undercharging. The new Patriot's battery is also automatically tested periodically by its built-in computer chip, to make sure it will handle the connected load demand when necessary.

Best Power's NEW Patriot UPS is Your Smart Choice for Providing Protected Computer Operation With Power That's Reliable at an Economical Price.

Patriot...The Mighty Mini UPS

Such is the full range of capabilities of the new Patriot UPS. Don't let its streamlined, compact size fool you...it provides a powerhouse of protection for your 250VA-to-600VA vital equipment. The new Patriot is one of your Best choices for dependable small system operation, worldwide.

Ultimate Control

Utilizing the optional CheckUPS II Suite software and interface cable with the new Patriot UPS, you'll know the amount of operational time you have left during power outages, so you can continue working until it's time to save data and perform a safe shut-down. And even if you're not on site, CheckUPS will perform such shut-down operations, as well as monitor and document power events in your absence, giving you peace of mind at all times. Now that's the ultimate in information protection and control!

Warranties and Service

Best Power Patriot UPS models come with a standard two-year limited warranty against factory workmanship defects. And under our exclusive limited "Double Lifetime" warranty, Best Power will factory-repair Patriot units due to damage from lightning strikes at no charge, and pay up to US\$25,000 for damage to your connected equipment resulting from a spike or surge (U.S. and Canada only).

Optionally, you may decide to invest in one of Best Power's BestServ™ extended and comprehensive warranties, which provide varying levels of scheduled maintenance and service over the life of your UPS; contact Best Power for details.

From sales to service, Best Power never stops. We provide responsive, reliable service, doing whatever it takes to be the only power protection source you need.

Anyone with an earlier version of CheckUPS II may down-
